Replaces/Upgrades Cisco®/Scientific Atlanta®
750/870/1002/1218 MHz Systems

Product Overview

The 4PAC-G HGD High Gain GaN 1.2 GHz enhanced system amplifier module from Broadband International® is designed to drop into any existing Broadband International® or GainMaker® system amplifier housing. The forward bandwidth is up to 1.2 GHz and can be utilized for any bandwidth from 750 MHz to 1.2 GHz. Complete housing with module/power supply or module only is available.

The amplifier accepts any standard GainMaker® style equalizer and long 1.6" JXP style pads. The interstage pad and equalizer set the output gain and slope for maximum performance. The new 1.2 GHz amplifier is equipped with Gallium Nitride (GaN) technology with two RF outputs. A plug-in jumper allows AUX port 1 or 2 to be enabled/disabled as required for network designs. AUX Port 1 and 2 can also be enabled with the optional splitter or DC-8/12 directional coupler plug-ins.

Features:

- Specified bandwidth performance to 1.2 GHz
- Utilizes GainMaker® style plug-in equalizers and pads
- Multiple options for return path bandwidth with removable duplex filter
- Low/high pass filters can be changed in the field
- Field upgradable from 42/54 to 85/102 or 204/258 MHz
- All modules contain a built in thermal network for thermal mode operations when an AGC is not installed
- Advanced AGC circuitry with loss of pilot protection
- Housing available with Chromate Conversion
