

Bode Equalizer

For ARRIS®/Magnavox®/C-COR® Network Amplifiers

The Bode Equalizer replaces the existing OEM lower frequency Bode Equalizer, or converts existing manual GNA/TNA network amplifiers to AGC-capable amplifiers. The Automatic Level and Slope Control (ALSC) network consists of two plugin components. The Bode Equalizer works in conjunction with the Bode Controller to control the output signal levels of the amplifier.

Broadband International® offers a wide assortment of both analog and QAM based Bode Controllers to accompany the Bode Equalizer.

OEM P.N.	BBI P.N.	Values
218422 – HI 750	495800	750 MHz HI
218422-6 – 870 MHz	495900	870 MHz
