

# Crowbar/Surge Protection Network

## For ARRIS®/Philips®/Magnavox®/C-COR® System Amplifiers

The Broadband International® replacement crowbar circuit installs into most ARRIS®/Philips®/Magnavox®/C-COR® GNA/TNA series amplifiers. The crowbar circuit is normally in the open state until a line voltage above 230-240 volts is detected. Then, the circuit will short to ground until the line voltage returns back to <230-240 volts.

OEM P.N.	BBI P.N.	Values
	260750	60-90 volt
